

**STATE ENVIRONMENTAL QUALITY REVIEW ACT  
DETERMINATION OF SIGNIFICANCE  
POSITIVE DECLARATION  
NOTICE OF INTENT TO PREPARE A  
DRAFT SUPPLEMENTAL GENERIC ENVIRONMENTAL IMPACT STATEMENT  
PROPOSED COMPREHENSIVE DEVELOPMENT PLAN (REUSE &  
REVITALIZATION PLAN), INCLUDING AMENDMENT OF TOWN OF RIVERHEAD  
COMPREHENSIVE PLAN, AMENDMENT TO ZONING CODE, AND SUBDIVISION  
OF EPCAL PROPERTY AT CALVERTON  
HAMLET OF CALVERTON, TOWN OF RIVERHEAD, NEW YORK**

Date: June 18, 2013

This notice is issued pursuant to Article 8 of the Environmental Conservation Law (State Environmental Quality Review Act [SEQRA]) and the implementing regulations therefor at 6 NYCRR Part 617.

The Town Board of the Town of Riverhead, as lead agency, has determined that the proposed action described below may have a significant effect on the environment and that a Draft Supplemental Generic Environmental Impact Statement (DGSEIS) will be prepared.

**Name of Action:** Proposed Comprehensive Development Plan, including amendment to Town of Riverhead Comprehensive Plan, Amendment to Zoning Code and Subdivision of EPCAL Property

**Project Location:** South side of New York State Route 25 (Middle Country Road), north of Grumman Boulevard, east of Wading River Manor Road, Hamlet of Calverton, Town of Riverhead

**SEQR Status:** Type I

**Description of Action:** The proposed action consists of the adoption of a comprehensive development plan (Reuse & Revitalization Plan), creation of a planned development zoning district; amendment of the Town of Riverhead Comprehensive Plan, the amendment of the zoning code and zoning map of the Town of Riverhead to rezone the 2,323.9-acre EPCAL property to that planned development zoning district; and the subdivision of the EPCAL property into 50 lots for ultimate redevelopment with a mix of uses (e.g., business [commercial and retail], industrial, residential, recreation, utilities) and the retention of substantial open space.

As the 2,323.9-acre EPCAL property is anticipated to be redeveloped over a multi-decade horizon, it is not possible to determine the precise uses or the precise square footage of each use that may be redeveloped. Moreover, as indicated in the *Real Estate Market Assessment Calverton Enterprise Park (EPCAL) Riverhead, New York*, prepared by RKG Associates, Inc. in association with Jeffrey Donohoe Associates LLC, dated December 8, 2011 (the "Market

Study”), there are a variety of different uses that would be feasible over the multi-decade redevelopment horizon, including, but not necessarily limited to:

- Multi-Modal Freight Village
- Agri-Business/Food Processing
- High-Tech Business/Green Technology/Research Park
- Mixed Use Planned Development

Thus, in order to ensure a comprehensive evaluation of the entire action (including the impacts of redevelopment) in accordance with SEQRA and its implementing regulations at 6 NYCRR Part 617, a conceptual development plan and subdivision plan have been prepared, and the DSGEIS will calculate a theoretical development program so that the environmental impacts associated with that theoretical development program can be fully evaluated in the DSGEIS.

As the EPCAL property includes regulated wetlands, land within the Wild, Scenic and Recreational Rivers System (WSRRS) for the Peconic River, and habitat for endangered species, the subdivision provides for maintenance of buffers of a minimum of 1,000 feet around designated wetlands (to accommodate documented and potential tiger salamander habitat), and also provides for approximately 596.4 acres of maintained grassland (458.1± acres of existing grassland to be maintained, and 138.3± acres of grassland to be created) to accommodate habitat for the short-eared owl. In addition, the subdivision provides for the preservation of 59.5± percent of natural area. This information will be fully documented in the DSGEIS.

The Town of Riverhead is also working with the New York State Legislature on legislation to designate the EPCAL property as an urban renewal area, set guidelines and time parameters for review of development actions and applications within EPCAL.

**Reasons Supporting This Determination:**

1. The proposed subdivision and redevelopment of the EPCAL property will increase the intensity of use at the site, and will require the adoption of a new zoning district to allow the contemplated development.
2. The subject property contains designated wetlands and portions of the property are situated within the Wild, Scenic and Recreational Rivers System corridor, and the impact of the subdivision and redevelopment of the site must be assessed.
3. The EPCAL property is situated within the Long Island Central Pine Barrens and the Central Suffolk Special Groundwater Protection Area, each a designated Critical Environmental Area, and the impact of the proposed subdivision and redevelopment on same must be evaluated.

4. The EPCAL property provides habitat for endangered species (e.g., tiger salamanders and short-eared owls), and the impact of the proposed subdivision on these species must be assessed.
5. Water use and sanitary discharge will increase with the subdivision and redevelopment of the property, and the impacts to water resources and the Riverhead Water District/Suffolk County Water Authority and Sewer District and their respective facilities must be assessed.
6. The proposed subdivision and redevelopment of the EPCAL property will increase impervious surfaces and increase stormwater. This impact must be assessed.
7. The proposed subdivision and redevelopment would substantially increase traffic generated and may have air quality impacts. These issues must be assessed.
8. As the subdivision will likely be developed over several years, construction will occur over multiple years. Construction impacts must be evaluated.
9. As the visual characteristics of the property will change, based upon the development of the subdivision, aesthetic impacts must be assessed.
10. Previous historic/archaeological surveys have been conducted at the subject property. Upon conveyance of the subject property from the U.S. Navy to the Riverhead Community Development Agency, specific covenants on the subject property were established. Therefore, the impact of the proposed action, as it relates to such covenants regarding historic and archaeological resources, must be assessed.
11. The subject property was occupied by the U.S. Navy and subsequently operated by the Northrop Grumman Corporation. Operations at the site included assembling, flight testing, refitting and retrofitting naval aircraft. On-site operations generated hazardous waste from 1954 to 1996. Therefore, impacts to subsurface conditions must be examined.

**Public Scoping:** Formal Scoping will be conducted. A Draft Scope has been prepared and is available on the Town's website at [www.townofriverheadny.gov](http://www.townofriverheadny.gov). Copies are also available from the Town Clerk. A scoping hearing has been scheduled for July 16, 2013 at 7:30 p.m. at Riverhead Town Hall, 200 Howell Avenue, Riverhead, New York. Written comments will also be accepted until July 23, 2013 at 12:00 noon.

**For Further Information:**

**Contact Person:** Jill Lewis, Deputy Town Supervisor

## FINAL SCOPE

### DRAFT SUPPLEMENTAL GENERIC ENVIRONMENTAL IMPACT STATEMENT FOR THE COMPREHENSIVE PLAN FOR THE DEVELOPMENT (REUSE & REVITALIZATION PLAN), INCLUDING AMENDMENT TO THE TOWN OF RIVERHEAD COMPREHENSIVE PLAN, AMENDMENT TO ZONING CODE AND MAP, AND SUBDIVISION OF EPCAL PROPERTY AT CALVERTON

#### SOUTH OF NEW YORK STATE ROUTE 25 (MIDDLE COUNTRY ROAD) EAST OF WADING RIVER MANOR ROAD CALVERTON, TOWN OF RIVERHEAD, SUFFOLK COUNTY

#### Overview

This document is a Final Scope for the Draft Supplemental Generic Environmental Impact Statement (DSGEIS) for the comprehensive development plan and subdivision of the EPCAL property at Calverton, which also involves, among other things, an amendment to the Comprehensive Master Plan, the creation of a planned development zoning district, a subsequent change of the zoning classification of certain parcels (the subject property) designated on the Suffolk County Tax Map as District 600 – Section 135 – Block 1 – Lots 7.1, 7.2, 7.33 and 7.4, subdivision and future development of such parcels in accordance with the planned development zoning district. A Final Environmental Impact Statement (FEIS) entitled *Final Environmental Impact Statement: Transfer and Reuse of the Naval Weapons Industrial Reserve Plan, Calverton, New York, December 1997* (hereinafter the “1997 FEIS”) was prepared by the United States Navy in 1997, pursuant to the National Environmental Policy Act (and as a Generic Environmental Impact Statement [GEIS] for the purposes of the State Environmental Quality Review Act [SEQRA]), for the overall Calverton property, a portion of which comprises the current subject property. In addition, supplemental studies based upon the 1997 FEIS/ GEIS were performed in 2004 and 2005. The Draft Scope, which was the subject of a public scoping hearing and written comment period, was based upon the issues analyzed in the 1997 FEIS/ GEIS, and this Final Scope has supplemented the analyses set forth in the Draft Scope based on comments received during the scoping process.

The subject property consists of 2,323.9± acres, and is situated on the south side of New York State Route 25 (Middle Country Road), north of Grumman Boulevard and east of Wading River Manor Road, in the hamlet of Calverton, Town of Riverhead, Suffolk County, New York.

To ensure that the DSGEIS will address all significant issues, formal scoping will be conducted pursuant to 6 NYCRR §617.8. This Final Scope provides a description of the proposed action and the proposed content for the DSGEIS. This Final Scope has been prepared in accordance with 6 NYCRR §617.8(f) and sets forth the following:

- Brief description of the proposed action;
- Potentially significant adverse impacts;
- Extent and quality of information needed to adequately address potentially significant adverse impacts;

- Initial identification of mitigation measures;
- Reasonable alternatives to be considered;
- An identification of the information/ data that should be included in an appendix rather than the body of the draft EIS; and
- Those prominent issues that were raised during scoping and determined to be not relevant or not environmentally significant or that have been adequately addressed in a prior environmental review .

### **Description of the Proposed Action**

The proposed action consists of the creation and adoption of a comprehensive development plan (Reuse & Revitalization Plan); amendment of the Comprehensive Master Plan; creation of a planned development zoning district; the amendment of the zoning code and zoning map of the Town of Riverhead to rezone the 2,323.9-acre EPCAL property to that planned development zoning district; and the subdivision of the EPCAL property into 50 lots for ultimate redevelopment with a mix of uses (e.g., business [commercial and retail], industrial, residential, recreation, utilities, open space).

As the 2,323.9-acre EPCAL property is expected to be redeveloped over a multi-decade horizon, it is not possible to determine the precise uses or the precise square footage of each use that may be developed. Moreover, as indicated in the *Real Estate Market Assessment Calverton Enterprise Park (EPCAL) Riverhead, New York*, prepared by RKG Associates, Inc. in association with Jeffrey Donohoe Associates LLC, dated December 8, 2011 (the "Market Study"), there are a variety of different uses that would be feasible over the multi-decade redevelopment horizon, including, but not necessarily limited to:

- Multi-Modal Freight Village
- Agri-Business/ Food Processing
- High-Tech Business/ Green Technology/ Research Park
- Mixed Use Planned Development

Thus, in order to ensure a comprehensive evaluation of the entire action (including the impacts of redevelopment in accordance with the proposed subdivision) as required pursuant to the State Environmental Quality Review Act (SEQRA) and its implementing regulations at 6 NYCRR Part 617, a conceptual development plan and subdivision plan will be prepared. The DSGEIS will calculate a theoretical development program so that the environmental impacts associated with that theoretical development program can be fully evaluated in the DSGEIS.

As the EPCAL property includes regulated wetlands, land within the Peconic River Wild, Scenic and Recreational Rivers System (WSRRS) corridor, and habitat for endangered species, the subdivision provides for maintenance of buffers of a minimum of 1,000 feet around designated wetlands (to accommodate tiger salamander habitat), and also provides for approximately 596.4 additional acres of land for habitat preservation (458.1 acres of existing grassland to be maintained, and another 138.3 acres to be restored and/ or designated for habitat preservation) including but not limited to habitat for the short-eared owl, northern harrier and the upland sandpiper. In addition, the subdivision provides a minimum preservation of 59.5± percent of

natural area (including the aforementioned 596.4 acres identified in the preceding sentence, and an additional 787.3 acres of existing woodland to be preserved). This information will be fully documented in the DSGEIS.

The following approvals have been preliminarily identified as being required to implement the proposed action:

| Agency  | Approval   |
|---|--|
| Town of Riverhead Town Board                            | <ul style="list-style-type: none"> <li>• Amendment to Comprehensive Master Plan</li> <li>• Creation of Zoning District</li> <li>• Rezoning of EPCAL Property</li> <li>• Adoption of Updated Urban Renewal Plan</li> <li>• Potential Modifications to Buffers along Grumman Boulevard and NYS Route 25</li> <li>• Resolution Approving Alteration of Boundaries of Adjoining Fire Districts</li> </ul>  |
| Town of Riverhead Planning Board                        | Preliminary and Final Subdivision Approval   |
| Town of Riverhead Sewer District                        | Sewer Availability   |
| Town of Riverhead Water District                        | Water Availability   |
| Town of Riverhead CDA                                   | Revision of Urban Renewal Plan   |
| Town of Riverhead Highway Department                    | Road Opening Permit (Town Roads)   |
| Wading River Fire District<br>Manorville Fire District  | Joint Resolution of Boards of Fire Commissioners Approving Alteration of Adjoining Fire Districts  |
| Suffolk County Department of Health Services            | <ul style="list-style-type: none"> <li>• Subdivision Approval</li> <li>• Water Supply</li> <li>• Sanitary Sewerage Disposal</li> </ul>   |
| Suffolk County Department of Public Works               | Highways Permit (County Roads)   |
| Suffolk County Planning Commission                      | Referral   |
| Suffolk County Water Authority                          | Water Supply (Potential)   |
| New York State Department of Transportation             | Highway Work Permit (State Roads)  |
| New York State Department of Environmental Conservation | <ul style="list-style-type: none"> <li>• General Permit for Stormwater Discharges</li> <li>• Modification to SPDES Permit for discharge to McKay Lake</li> <li>• Potential Public Water Supply Permit</li> <li>• ECL Article 11 Incidental Take Permit</li> <li>• Freshwater Wetlands Permit</li> <li>• Wild, Scenic and Recreational Rivers Permit (for Subdivision of Land)</li> <li>• Modification of Wild, Scenic and Recreational Rivers Corridor Boundary</li> </ul> |

The section of the DSGEIS entitled *Description of the Proposed Action* will provide a thorough description the proposed action and a brief description of the existing conditions on the 2,323.9± - acre site. The *Description of the Proposed Action* section of the DSGEIS will specifically include information relating to:

- Description of the proposed action.
- Site and project history and current level of activities on the project site.
- Physical characteristics of the site, such as the boundaries, size, and existing pervious and impervious areas. Existing lots and uses will be graphically depicted.
- Existing conditions, including surrounding land uses and road/ highway network.
- Existing covenants and restrictions or other encumbrances.
- Description of the proposed planned development zoning district and the specific uses and maximum potential development that can occur on the subject property under such zoning district.
- Description of the proposed subdivision, including a depiction of all proposed lots.
- Information regarding the proposed conceptual development, including zoning and build-out data (e.g., areas of buildings, pavement, recreational areas, natural areas, landscaping, buffers, etc.).
- Breakdown and description of the various open space areas to be provided, including acreages, and any other relevant factors.
- Utilities and existing on-site and adjacent infrastructure systems.
- Discussion of proposed traffic and circulation plan.
- Infrastructure requirements, including water supply, wastewater treatment, stormwater management, and energy supply.
- Project purpose, need and benefits. In addition, the DSGEIS will discuss the Town's goals and objectives with regard to the rezoning and redevelopment of the subject property.
- Demolition requirements and any hazardous materials related thereto.
- Project timing.
- Required Local, County, State and/ or Federal approvals.

## **Potentially Significant Adverse Impacts**

The DSGEIS will be prepared in accordance with this Final Scope and in accordance with 6 NYCRR §617.9(b). Based upon review of the site, the proposed subdivision and conceptual plan, the June 2013 Environmental Assessment Form (EAF) and the 1997 FEIS, a Positive Declaration was issued by the Town Board of the Town of Riverhead on June 18, 2013. The environmental issues listed below and to be included in the DSGEIS are based upon those included in the 1997 FEIS as well as comments received on the Draft Scope. The identified potential adverse impacts as well as other relevant issues will be fully addressed in various DSGEIS sections, as briefly outlined below.

### **Land Use and Zoning**

This section of the DSGEIS will describe existing land use and zoning on the subject site and in the surrounding area. As part of this section, relevant land use (comprehensive) plans, including, but not limited to, the 1996 *Comprehensive Reuse Strategy for the NWIRP at Calverton*, the 1998 *Calverton Enterprise Park Urban Renewal Plan*, the 2003 *Town of Riverhead Comprehensive Plan*, and the *Central Pine Barrens Comprehensive Land Use Plan*, and policies, will be reviewed.

This section will describe the proposed new zoning district, its adoption by the Town of Riverhead and the subject property's placement into that zoning district. In addition, this section will provide a detailed description of the proposed subdivision and conceptual development plans. The DSGEIS will describe and quantify the areas to be developed with buildings, parking areas, roadways, walkways, recreational areas, etc., as well as their uses, and will compare these data to the existing conditions. In addition, this section will discuss existing and proposed natural areas and recreational areas to be maintained or created on the site (including but not limited to a trail that will generally traverse the perimeter of the site).

In addition to examining the proposed uses, the DSGEIS will describe existing on-site uses that would be removed, displaced (if any) or maintained (e.g. recreational facilities). This section will also discuss public access to and maintenance/ ownership of open space, non-motorized recreational trails and paths and recreational areas to be created or maintained on-site.

Based on the foregoing information, the DSGEIS will assess the impacts and compatibility of the new proposed zoning district (including permitted uses), the change of zone, and the subdivision and conceptual site development on land use and zoning (including bulk requirements), and will examine the established development policies, patterns and neighborhood and area character.

In addition to the above, the DSGEIS will discuss potential land use impacts of the proposed action upon Peconic Headwaters. Although the assessment in this section of the DGEIS would predominantly relate to the potential land use and community character impacts upon such lands, additional discussion of the Peconic Headwaters would be included within the

“Water Quality and Hydrology” and “Terrestrial and Aquatic Environment” sections of the DSGEIS.

### Socioeconomics

The socioeconomic analysis will provide an overview of the demographics and housing market trends that existing within the regional economy. In addition, labor market conditions in the Long Island region will also be presented. An analysis of the anticipated growth sectors that may have significance for the EPCAL site will be presented. The baseline analysis will also include a review of real estate conditions in the office and industrial markets to determine competitive placement of the property. The socioeconomic analysis will also include a market study, which evaluates various uses (including potential specialty uses) that may be viable for the subject property.

An absorption study was conducted by RKG Associates, Inc. The results of that study, along with the Real Estate Market Assessment prepared by RKG and dated December 8, 2011, will be summarized and incorporated into the DSGEIS. These studies have been used as the bases for formulating the conceptual development plans and time horizon that are to be analyzed in the DSGEIS.

An analysis of the potential fiscal impacts of the proposed action will be prepared. Specifically, using information and projections prepared by the Town tax assessor, an analysis of potential property tax revenues associated with the potential development of the subject property will be presented. Projected property tax revenues will be indicated for each applicable taxing jurisdiction. In addition, this section will examine potential construction and permanent job creation as a result of future development resulting from implementation of the proposed action.

### Community Facilities and Services

The expected impact on community services will be evaluated in this section of the DSGEIS. Specifically, the DSGEIS will identify all community service providers and assess the impacts of the proposed action on fire protection services (including a discussion of how service response would be integrated amongst the three fire districts that serve the site), ambulance and emergency medical services, health care, police protection, solid waste collection and disposal and education facilities. The impact assessment will include consultation with the various service providers to determine the existing facilities and ability to serve the future conceptual development.

### Transportation

This section of the DSGEIS will describe the existing traffic conditions and evaluate the effects of the proposed action on the surrounding area roadways and public transportation systems. A Traffic Impact Study will be prepared for the study area, which will include the following items:

- Existing roadway features in the study area, including the number, direction and width of travel lanes, posted speed limits, maintenance jurisdiction, parking regulations, signs and traffic control devices will be identified.
- Manual turning movement counts will be conducted on one typical weekday during the AM commuter peak period (7:00 a.m. to 9:00 a.m.) and PM commuter peak period (4:00 p.m. to 6:00 p.m.) and mid-day on a typical Saturday (10:00 a.m. to 2:00 p.m.) at the following intersections:
  1. NYS Rte. 25 at NYS Rte. 25A
  2. NYS Rte. 25 at Edwards Avenue
  3. NYS Rte. 25 at Burman Boulevard/ Site Access
  4. NYS Rte. 25 at Wading River-Manor Road
  5. NYS Rte. 25 at Manor Road/ Splish Splash Drive
  - 6.
  7. Wading River – Manor Road at North Street
  8. Wading River-Manor Road at LIE North Service Road (NSR)
  9. Wading River-Manor Road at LIE South Service Road (SSR)
  10. Edwards Avenue at River Road
  11. Grumman Boulevard at Wading River– Manor Road
  12. Grumman Boulevard at Burman Boulevard

Other roadways (i.e., Raynor Road, North Street/ Mill Road, Wading River Manor Road, River Road, Old River Road, Line Road, and Connecticut Avenue) within the general study area will be examined for possible impacts in a qualitative manner.

- Automatic Traffic Recorders (ATRs) will be placed for a one week period at the following locations:
  - NYS Route 25 west of site access
  - NYS Route 25 east of site access
  - Burman Boulevard south of NYS Rte. 25
  - Burman Boulevard north of Grumman Boulevard
- The collected data, as described above, will be compiled, and analyses of the existing operating conditions during the peak Weekday AM and PM periods and the mid-day Saturday period will be conducted using the appropriate methodology presented in the latest edition of the Highway Capacity Manual.
- A qualitative evaluation of the seasonal nature of traffic conditions in the study area will be performed. Many of the roadways in the study area experience seasonal fluctuation in traffic volumes in the summer and autumn related to tourism and agriculture. These peaks, unrelated to the development of the EPCAL property, will be discussed in the context of variations in background traffic levels and their effects on traffic conditions in the study area.
- Current traffic accident data for the most-recent three-year period available for the study intersections will be obtained from the New York State Department of Transportation (NYSDOT), and summarized. Any significant trends/ patterns that might be impacted by the proposed development will be identified and the need for corrective measures evaluated.

- The latest available information from appropriate governmental agencies will be obtained regarding any planned roadway/ intersection improvement projects in the study area. Specifically, the applicants will contact the Town of Riverhead, the Suffolk County Department of Public Works (SCDPW), and the NYSDOT. Any such improvements, based upon responses received, will be incorporated into the future "No-Build" and "Build" analyses.
- The "No-Build" base traffic conditions will be estimated by applying a background traffic growth factor using NYSDOT's LITP rates to the existing traffic volumes. In addition, traffic generated by other planned developments in the vicinity of the site will be included in the "No-Build" base condition. The location and nature of such proposed projects will be determined through consultations with the Town of Riverhead.
- Trip generation estimates will be prepared for the proposed project (for two "Build" condition scenarios) based upon information obtained from the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9<sup>th</sup> edition. Appropriate internal trip capture credits and/ or pass-by credits, if applicable, will be applied to the site generated traffic upon agreement with the Town.
- Using previous studies and census data, the population distribution in the vicinity of the site, and existing travel patterns, trip distribution patterns will be determined and site-generated traffic will be assigned to the roadway network in the study area.
- The site generated traffic will be added to the "No-Build" volumes at each of the study intersections to determine the "Build" conditions. "Build" conditions will be conducted for the year 2025 and for full occupancy at a future year to be determined. The "Build" conditions will then be analyzed using SYNCHRO, version 8 to determine the relative impacts of the proposed project on surrounding roadways.
- An evaluation of the proposed site access and overall site layout with regard to access and internal circulation will be conducted.
- Evaluation of potential temporary access points to subdivision parcels directly adjacent to NYS Rte. 25 will be performed. Given the potential for development of some parcels adjacent to the state highway prior to the completion of the internal roadway system, it may be necessary to provide for access to individual parcels directly to NYS Rte. 25 for some period of time. General recommendations will be developed and the process for obtaining access to the state highway will be discussed.
- An evaluation of buffers, setback requirements, and easements for lots located within the proposed subdivision situated on and along Route 25 to accommodate future potential traffic and transportation improvements along Route 25.
- Parking requirements will be developed for the theoretical uses to be considered for the proposed subdivision.
- An inventory of available public transportation within the study area will be provided. Specifically, bus routes serving the site, and the frequency of such service, will be provided.

- The walkability of the proposed development, (including a discussion of internal and external pedestrian circulation) will be evaluated. A discussion of the potential bicycle use and internal and external bicycle facilities will be included.
- Potential impacts to study area roadways during construction will be evaluated. This will include a discussion of the anticipated construction schedule (as available), construction vehicle traffic and access, and recommended routes for construction vehicles to minimize impacts on area roadway.
- The need for mitigation measures will be determined based upon the results of the analysis.

This section of the document will also discuss existing air traffic and any anticipated impacts to air traffic.

### Air Quality

The existing air quality of the area will be evaluated in this section of the DSGEIS. Monitoring data available from the NYSDEC will be used to define existing air quality levels. Existing levels will be compared to Federal and State air quality standards. Since the project is located in a non-attainment area for ozone and a maintenance area for carbon monoxide, air quality emission analysis to satisfy the Transportation Air Quality Conformity Regulations will be undertaken under the guidance of the NYSDOT. The DSGEIS will describe the methods and procedures specified by the NYSDOT *Environmental Procedures Manual* (EPM) air quality chapters with respect to mobile sources.

As required, the DSGEIS will address transportation conformity hot-spot requirements for this pollutant, as described in the *Transportation Conformity Guidance for Qualitative Hot-Spot Analysis in PM<sub>2.5</sub> and PM<sub>10</sub> Nonattainment and Maintenance Areas and subsequent FHWA/EPA* guidance documents.

The DSGEIS will address emissions of Mobile Source Air Toxics (MSATs) that may result from the proposed action as described in the FHWA document *Interim Guidance Update on Mobile Source Air Toxic Analysis in NEPA Documents*, dated September 30, 2009.

Following NYSDOT procedures, a screening analysis will be used to determine the intersections requiring a detailed microscale air quality analysis. The proposed development will generate site traffic, and its impact on air quality levels will be assessed. Once traffic engineering data are available, intersections with significant increases in traffic or significant decreases in level of service will be identified. From that list of intersections, select intersections will undergo detailed air quality analyses following NYSDEC protocols and will follow guidance presented in the NYSDOT EPM air quality chapters. The list of intersections undergoing detailed analysis will be presented for approval to the lead agency, prior to undertaking the analyses. The analyses will contain existing, no-build and build scenarios.

Where air quality impacts are projected to exceed Federal or State guidelines, the traffic engineers will be consulted, and mitigation measures will be proposed to address such impacts.

With respect to stationary sources, emissions could result from the use of boilers for heating and hot water in newly-constructed buildings on the site. It is assumed that the existing steam/ condensate facility that is located within the off-site Calverton Camelot industrial subdivision would not be used to supply heat or hot water required for the proposed development. The proposed action does not anticipate any other facility on-site to supply power demand. However, if any individual emissions sources would be generated in the future, the source would be required to comply with relevant air-permitting regulations to ensure no significant adverse impact to air quality would occur. Although it is not expected that individual buildings sources would be major sources of air emissions, a qualitative analysis will be presented in this section of the DSGEIS.

As a component of the air quality analyses to be conducted for the build condition, a qualitative assessment of greenhouse gases (GHGs) would also be performed (as no users have been identified and buildings will not be designed until after the SEQRA process is completed and the property is rezoned, it is not possible to prepared a detailed GHG analysis). Direct and indirect sources that could be expected to be introduced to the site as a result of the proposed action would be identified, to the extent practicable. The DGEIS will identify minimum design features that would be required for each development, in order to minimize potential impacts from GHGs.

Finally, future construction activity air quality impacts will be qualitatively addressed. Dust controls during construction will be presented. Other sources of air emissions will also be qualitatively evaluated as part of the environmental review process.

### Noise

The DSGEIS will document existing noise levels and sources on the subject property and in the surrounding area, through site-specific noise monitoring. In addition, a noise impact assessment will be conducted to evaluate the noise levels with the proposed project (both short-term construction-related noise, and long-term operational noise). The assessment of project-induced traffic noise and traffic-related construction noise will follow the methodologies outlined in the NYSDOT *Environmental Procedures Manual* (or latest procedural document). Noise associated with the proposed action will be compared to existing noise levels and noise associated with the former use of the subject property as an aircraft testing facility. This assessment will consider existing and proposed air traffic.

The general characteristics of sound and noise analysis will be presented in this section of the DSGEIS. In addition, Federal Highway Administration (FHWA), NYSDOT and Town of Riverhead noise impact criteria will be discussed.

Using land use and zoning maps, noise-sensitive land uses adjacent to traffic count locations and other noise-sensitive land uses will be candidate locations for noise monitoring and impact analysis. It is estimated that up to three locations will be selected for noise

monitoring during the relevant study periods. The results of the site-specific noise monitoring will be presented and evaluated.

The FHWA Traffic Noise Model (TNM) will be used to calculate sound levels associated with the traffic generated by implementation of the proposed action. The noise monitoring data will be used to validate the TNM model. The TNM input data will include peak noise period traffic volumes, vehicle speeds, and roadway and receptor geometry. The attenuation effects of vegetation, trees, and building structures will also be included in the modeling analysis. Based upon this information, TNM will calculate sound levels at each receptor location within the study area for existing and future build conditions.

Projected mobile-source noise levels will be compared to applicable standards and guidelines including those of the Town of Riverhead Noise Control ordinance, Federal Highway Administration, NYSDOT and the United States Department of Housing and Urban Development. At locations where impacts are expected, mitigation measures will be identified to minimize noise impacts. Mitigation measures for avoidable impacts will be examined, and feasible abatement measures will be recommended, as necessary.

For purposes of comparing potential future noise impacts with historical aircraft noise, noise contours at the Calverton NWIRP property for the year 1991 will be presented. Operations in 1991 mainly involved military jets. These historic noise contours will be compared to the future noise levels expected as a result of the proposed action.

In addition, the potential for future stationary source sound levels will be discussed qualitatively, and with respect to the relevant recommendations and requirements of federal and Town standards.

Finally, impacts on noise levels during construction would include noise from construction equipment operating at the site and construction vehicles/ delivery vehicles traveling to and from the property. Noise impacts will vary widely depending upon the phase of construction. A qualitative analysis of the anticipated construction noise impacts will be presented in this section of the DSGEIS.

### Infrastructure

The DSGEIS will include a discussion of the existing infrastructure and associated easements on the site and those which may be located off-site, but currently serve the property. The Parsons, Brinckerhoff, Quade & Douglas analysis (1995) in conjunction with the HR&A Opportunities and Constraints Analysis (2005) will be used as the basis for the evaluation. The analysis presented in this section of the DSGEIS will focus on the following: water supply system (including irrigation), sanitary sewer system including sewage treatment, stormwater drainage, natural gas, steam/ condensate, and electricity.

The impact to these infrastructure systems and the potential need for expansion, upgrading, and/ or modification, will be discussed with respect to the proposed conceptual development.

### Cultural Resources

This section of the DSGEIS will summarize existing information with respect to the presence (or absence) of historic or archaeological resources on or adjacent to the subject property. In addition, the agreement between the Town of Riverhead Community Development Agency and the New York State Office of Parks, Recreation and Historic Preservation with respect to the rights and responsibilities associated with preservation and the future development of the property will be discussed herein.

This section will summarize the restrictive covenants included in the original deed for the land conveyed by the U.S. Navy to the Town regarding Indian artifacts or remains.

Once these issues are set forth in the DSGEIS, an analysis of the future development of the subject property upon implementation of the proposed action with respect to these rights and responsibilities will be evaluated.

### Geology, Soils and Topography

Relevant documentation will be reviewed to determine the geological characteristics of the site and surrounding area.

The *Soil Survey of Suffolk County* will be used to determine the soil types on the site, and the characteristics of such soils. The suitability of the soils (stability, quality, etc.) and potential engineering limitations for the proposed site alterations and proposed uses on the site will also be examined. This published data will be supplemented with site-specific soil borings, the results of which will be discussed in the DSGEIS, as available.

The DSGEIS will also include topographic information obtained through review of relevant USGS maps and site-specific topographic surveys, as available.

A narrative description of potential impacts to soils and topography and strategies to minimize such impacts will be included in the DSGEIS. A description of measures that will be implemented in the future to mitigate impacts due to potential erosion and off-site sediment transport will be presented. The DSGEIS will also discuss the potential changes in topography that may result from future development resulting from implementation of the proposed action.

## Water Quality and Hydrology

Regional and local hydrogeological conditions, including a discussion of the aquifers and general water quality (using the results of the *Final Long Island Groundwater Management Plan*) will be discussed in this section of the DSGEIS. Depth to groundwater and direction of groundwater flow, based upon the groundwater divide will also be determined.

The subject property is located in Hydrogeologic Zone III, as identified in the *Long Island Comprehensive Waste Treatment Management Plan* (the “208 Study”). The proposed actions’ consistency with the relevant recommendations of the 208 Study will be described herein. The existing on-site groundwater wells that were used with respect to drinking water supply for the former development, and their current status, will be described. The need for the Riverhead Water District to seek approvals for additional public water supply wells at the site to serve the future development, and the hydrologic effects associated with the additional pumpage from same, would be assessed. Such analyses would assess the potential for the additional pumpage to affect water levels at the on-site surface waters, including any surface waters that are documented as breeding habitat for the tiger salamander. Further, the effects of the proposed action upon the overall water budget of the site, including impacts associated with stormwater and wastewater management, would be assessed. Potential effects of additional groundwater pumpage on groundwater contamination and remediation efforts will be discussed.

As the subject property is located within the Central Suffolk Special Groundwater Protection Area (SGPA), a Critical Environmental Area, a discussion of the proposed action’s potential impact on such resources will be included in this section of the DSGEIS. A discussion of the relationship of the SGPA to the Central Pine Barrens and the potential impacts of the project on same will be discussed in this section of the DSGEIS.

The DSGEIS will also address potential impacts to water quality from landscaping that would require the use of fertilizers and pesticides. The potential to maximize the use of non-fertilizer dependent species will be assessed. The potential use of pervious surfaces in place of typically impervious surfaces will also be examined.

With respect to surface water, the subject property is located in the Peconic River drainage basins. Therefore, this section of the DSGEIS will discuss the attributes of the drainage basin and the river, as well as the requirements of the New York State Wild, Scenic and Recreational River System, of which the Peconic River is a part. Potential water resource impacts upon the Peconic Headwaters would also be addressed in this section. In addition, this section will provide a summary of the relevant portions of water resource management plans (e.g., the Peconic Estuary Comprehensive Conservation and Management Plan, Brown Tide Comprehensive Assessment and Management Program).

Furthermore, this section of the DSGEIS will provide a discussion of the other surface water bodies that are located on the subject property, and the potential for the proposed action to adversely impact water quality at such water bodies, would be assessed. Potential impacts upon designated wetlands and their associated ecological communities will be described in the section of the DSGEIS entitled “Terrestrial and Aquatic Environment.”

The subject property, although not coastal, is shown on the New York State Coastal Map as a Significant Coastal Fish and Wildlife Habitat, due to the presence of the Peconic River. The specific features associated with this Significant Coastal Fish and Wildlife Habitat will be discussed herein.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) will be reviewed and evaluated with respect to the location of the floodplains associated with the off-site Peconic River, and other water bodies that are located on the subject property. An analysis of the proposed project with the respect to the floodplains and the potential for the site to be located within a special flood hazard area will be conducted.

Once the existing conditions data are obtained with respect to groundwater, surface water and floodplain resources, changes expected as a result of future development on the subject site and its impact upon water resources on the subject property and in the surrounding area will be assessed.

#### Terrestrial and Aquatic Environment

The prior analyses of natural resources existing on the site will be summarized and an updated site inspection by a qualified biologist/ ecologist will be conducted to document current vegetation, wildlife, and the general habitat character of the property. An inventory of flora and fauna observed and expected will be provided in this section of the DSGEIS along with a vegetation map. Protected native plants, and terrestrial and aquatic plant and animal species listed as endangered, threatened, or of special concern will be identified and specifically discussed. As part of the ecological assessment, the New York State Department of Environmental Conservation (NYSDEC) Natural Heritage Program (NHP) will be consulted to update available information on significant natural resources on the site and in the surrounding area. The specific ecology associated with the Central Pine Barrens SGPA will be evaluated and presented in this section of the DSGEIS.

To supplement this information, an assessment of the ecological system as a whole across the entire site will be presented. The focus of this assessment will not only be on individual plants and animals within the project site, but will also include a discussion of their interactions with each other and the existing habitat. The existing conditions of different sections of the site will be presented and their habitat values will be determined.

In addition, a discussion of the aquatic environments at the site, with respect to existing wetlands and wetland communities, will be included in this section of the DSGEIS.

Once the existing conditions data are obtained, anticipated changes resulting from implementation of the proposed action that could potentially impact natural resources on the site and in the surrounding area will be evaluated. This section of the DSGEIS will evaluate potential impacts of the proposed action on the site and area ecology, including the potential impact on protected native plants, and plant and animal species listed as endangered, threatened, or of special concern, as well as identified wetland communities.

As part of this evaluation, a Comprehensive Habitat Protection Plan would be prepared to identify each habitat type under existing conditions and upon implementation of the proposed action (this Plan would be summarized in the body of the document and appended in its entirety). Specific consideration would be given to sensitive ecological resources at the site (e.g., rare species and ecological communities and their locations on the property), and the relevant mitigation measures to be implemented as part of the proposed action (including during the construction period) would also be incorporated into the Comprehensive Habitat Protection Plan (e.g., periodic mowing of grassland, protective measures to ensure preservation of grassland to be retained [e.g., covenants, conservation easements, dedication of land to preservation entity], grassland creation [e.g., planted soil over portions of runway, establishment of drainage reserve areas that contain grassland, conversion of old field scrub and scrub acreage] and timing therefor).

In addition, this section of the DSGEIS will discuss the measures developed to provide for maintenance of buffers of a minimum of 1,000 feet around designated wetlands (to accommodate tiger salamander habitat), and to provide for approximately 596.4 acres of maintained grassland (458.1 acres of existing grassland to be preserved, and 138.3 acres of grassland to be created) to accommodate habitat for the short-eared owl. In addition, this section will discuss how the subdivision provides for the preservation of over 59.5 percent of existing natural area (i.e., grassland and woodland), and how the design of the subdivision will help to protect the ecological resources of the Peconic Headwaters.

#### Petroleum and Hazardous Materials

The DSGEIS will summarize the former and any current environmental investigations and remediation that are associated with the subject property and immediately adjacent properties. As general background, on-site operations generated hazardous waste from 1954 through 1996. However, such on-site operations were generally confined to the off-site area of the current Calverton Camelot industrial subdivision. Since 1986, the U.S. Navy has conducted environmental investigations and clean-ups throughout the site. A Remedial Feasibility Investigation was conducted by the U.S. Navy in 1997, which indicated on-site Volatile Organic Compound (VOC)-contaminated groundwater with the potential for off-site migration. The U.S. Navy submitted a Feasibility Study for specific areas (including an area identified as the Southern Area groundwater plume) of the site as a follow-up. The U.S. Navy completed a Corrective Measures Study for the Southern Area in 2011. A soil vapor intrusion investigation was conducted in 2011, which indicated that there were no potential impacts. A number of sites within the off-site industrial subdivision are listed on State and Federal databases with respect to potential contamination. This section of the DSGEIS will examine the available information and provide a discussion of the potential impacts of future

development associated with implementation of the proposed action with respect to the remaining areas of potential environmental concern.

#### Visual Resources

This section of the DSGEIS will discuss the existing visual character of the subject property and the proposed project area and representative photographs will be provided. Potential changes to visual character from various vantage points (e.g., Route 25 corridor) will be evaluated through narrative descriptions. The analysis also will examine the effect of the potential design standards, buffering, landscaping, fencing and signage (based upon the proposed planned development district) on the visual character of the project area.

This section of the DSGEIS will discuss potential lighting associated with future development, based upon the proposed planned development district and existing Town dark sky requirements. It will discuss methods for ensuring that no spill-over lighting impacts would occur to on-site preserved open space/ buffer areas, adjacent properties and roadways.

#### Cumulative Impacts

The DSGEIS will examine the cumulative impacts associated with the development of other planned or approved projects in the surrounding area with respect to the impact issues described above, if any.

#### **Extent and Quality of Information Needed to Adequately Address Potentially Significant Adverse Impacts**

In order to conduct the analyses of potential adverse impacts, available information will be collected and reviewed and empirical information will be developed. Relevant information from the prior 1997 FEIS will be incorporated, as necessary. While it is not possible to determine all information sources to be used, the following represent sources/ research that have been preliminarily identified as necessary to perform the required analyses in the DSGEIS.

#### Land Use and Zoning

- *Final Environmental Impact Statement: Transfer and Reuse of the Naval Weapons Industrial Reserve Plant, Calverton, New York*, U.S. Department of the Navy, December 1997

#### **Initial Identification of Mitigation Measures**

As the DSGEIS analyses have not yet been conducted, no specific mitigation measures have yet been developed. Nonetheless, where the impact analyses conducted in the DSGEIS indicate the potential for significant adverse impacts, this section of the DSGEIS will set forth measures to mitigate those impacts.

#### **Reasonable Alternatives to Be Considered**

Pursuant to 6 NYCRR Part 617, the DEIS must contain a description and evaluation of reasonable alternatives to the proposed action. Thus, the DEIS will analyze the impacts of the following alternatives and quantitatively and qualitatively compare these impacts to those associated with implementation of the proposed action, based upon the specific issues outlined above:

- No-Action (site remains as it currently exists)
- Mixed Use and Polo Alternative
- Alternative Subdivision Design, prepared by representatives of the environmental community
- Alternative Subdivision Design, which “reverses” areas to be developed and areas to be preserved

### **Conditions and Criteria under Which Future Actions will Be Undertaken or Approved**

This section of the DSGEIS will set forth the specific conditions or criteria under which future actions will be undertaken or approved (e.g., obtaining letters of sewer and/ or water availability, ensuring appropriate traffic mitigation, potential for re-evaluation of traffic conditions in the future), including any requirements for subsequent environmental review compliance. This will assist in ensuring that the level of development and its associated impacts are monitored over the course of the build-out period and comply with the conditions and criteria established as a result of the environmental analyses conducted, and that necessary mitigation measures are put in place to minimize potential significant adverse impacts.

### **Growth-Inducing Impacts**

The DSGEIS will discuss the growth-inducing aspects of the proposed action, including, but not limited to, potential spin off-development and potential increase in population due to the proposed development of non-residential uses on the property.

### **Use and Conservation of Energy**

This section of the DSGEIS will contain a description of the energy sources to be used during the construction and operational phases of the proposed project, including potential alternative energy sources. Anticipated levels of demand will be estimated. Relevant energy-efficiency measures will be discussed.

The DSGEIS will also discuss and provide an analysis of energy consumption by the proposed development, including conformance with applicable Town standards as well as mitigation measures proposed to minimize energy consumption.

### **Information/Data to be Included in the Appendix**

- Copy of the Positive Declaration and Final Scope
- Subdivision and Related Plans
- Relevant excerpts of prior studies conducted that affect the subject site
- Relevant technical data used in performing various analyses
- Correspondence with community service providers
- Traffic Impact Study
- Site and area photographs

**Issues Raised during Scoping and Determined to be Not Relevant or Not Environmentally Significant or that have been Adequately Addressed in a Prior Environmental Review**

Pursuant to 6 NYCRR Part 617 (i.e., the implementing regulations of SEQRA), an environmental impact statement is required to identify and evaluate potential significant adverse environmental impacts and to identify mitigation measures, to the maximum extent practicable. The Town of Riverhead received a number of comments during the scoping period, both in the form of written correspondence and orally at the scoping meeting held on July 16, 2013. The issues identified within the comments received that are relevant for inclusion in the DSGEIS have been incorporated into this Final Scope and will be evaluated in the DSGEIS.

The following issues were raised during the scoping process and, while they are relevant to the Town Board's overall decision making regarding EPCAL as well as the ultimate administration of development approvals, they were deemed not relevant to the environmental review and/ or were determined not to be environmentally significant: creation of Business Improvement District, creation of citizens action group/ community advisory committee to monitor development, timing of site plan approvals, apprenticeship programs, loans and other financial assistance associated with specific energy programs (e.g., Energy Star®), and tax incentives (as no tenants have been identified).

In addition, there were some comments made regarding the proposed traffic evaluation that have not been included in this Final Scope. Representatives of the Town of Riverhead met with representatives of the New York State Department of Transportation to discuss the parameters of the traffic study, and this Final Scope represents the analyses required based upon that meeting.
